

# 1) Schema Builder

## 2)Project flow

## 4) Tools used

### 1. **Salesforce Custom Objects:**

- Create custom objects to represent entities like Vehicles, Customers, Sales, and Services.

### 2. **Process Builder:**

- Automate business processes like updating records when a vehicle is sold or when a service is scheduled.

### 3. **Flow Builder:**

- Build guided flows to streamline data entry and automate complex business processes.

### 4. **Reports and Dashboards:**

- Utilize Salesforce's reporting tools to track sales performance, inventory levels, and service history.

## 5. **Salesforce Mobile App:**

- Enable the mobile app for on-the-go access to customer information and sales updates.

## 6. **Approval Processes:**

- Implement approval processes for key actions such as discounts or high-value sales.

## 7. **Salesforce Connect:**

- Integrate external systems or databases for additional data sources related to vehicles.

## 8. **Permission Sets and Profiles:**

- Manage user access and permissions based on roles within the vehicle sales process.

## 9. **Salesforce CMS (Content Management System):**

- Organize and share relevant content, such as vehicle specifications or marketing materials.

## 10. **Salesforce Lightning Components:**

- Develop custom components for specific functionalities tailored to your vehicle management needs.
